

SPARES REPAIR SUPPORT PACK OR BLUEPACK

The Blue Pack (SRSP) is a 6 meter ISO container fitted with numbered racks, bins and shelving to make available a wide range of spares parts for maintenance and repair of the Husky 2G. Interior LED lighting is provided and also a solar charging system to keep the batteries ready for installation. The Blue Pack (SRSP) stores specific first and second line operational spares to recover and to maintain the Husky 2G vehicle during the mine sweeping and proofing deployment tasks.

HUSKY 2G BLUEPACK
RENOVED FOR ITS VERSATILITY, STRENGTH & STAMINA

The SRSP is self-contained and is normally mounted on a low bed logistical vehicle, capable of carrying a 20 foot ISO container for transport to the repair site. The contents are secured and placed in a position to enable safe withdrawal and replacement of the spare parts. The spares are preserved. Each SRSP contains major repair parts such as wheel assemblies, leaf springs, detection heads, batteries, protection tiles, an engine and transmission assembly and various small parts. A toolbox is included containing the required tools and special equipment.

Inside left view with fold down work bench above the Engine assembly in the stowed position and various spare parts and bins.

Two solar charging display panels for the two batteries and the container light switch to the right of the control panels.
